PROFESSIONAL SUMMARY

Data Scientist with experience developing end-to-end machine learning, analytics, and business intelligence solutions. Strong background in predictive modeling, statistical analysis, feature engineering, time-series forecasting, and data-driven decision support. Experienced in translating complex business challenges into scalable analytical solutions, including model development, validation, deployment, and performance evaluation. Prior experience in the mining industry, supporting large mining organizations and multidisciplinary stakeholders, providing a solid foundation for industrial analytics and operational optimization environments.

KEY ACHIEVEMENTS

Delivered end-to-end data science and analytics solutions, transforming business requirements into actionable insights and data products.

Developed enterprise-level dashboards and KPI monitoring solutions using Qlik Sense Enterprise and Power BI, enhancing operational visibility and decision-making.

Designed and implemented analytical solutions using SAS, supporting data management, statistical analysis, and business reporting.

Led process mapping and workflow optimization initiatives, enabling automation, efficiency gains, and the development of scalable data solutions.

CORE SKILLS

Data Science | Data Analytics | Business Intelligence | Statistics | Machine Learning | Deep Learning | Econometrics | A/B Testing | Process Mapping | Process Automation | Qlik Sense | Power BI | SAS | Python | SQL | TensorFlow | Pytorch | Scikit-Learn

PROFESSIONAL EXPERIENCE

Data Scientist | Minas Gerais State Court of Justice (TJMG) – Contractor | 2023–Present

Working within one of Brazil's largest public institutions, I develop Business Intelligence, Analytics, and Data Science solutions that support strategic decision-making, institutional governance, and digital transformation initiatives. My work involves translating complex business challenges into data-driven solutions, leveraging analytical models, dashboards, and data integration processes to improve operational efficiency and public service delivery.

One of the most impactful projects I led was the development of a prioritization model for the implementation of Digital Courts across the 555 municipalities of Minas Gerais. The solution integrated public and internal data sources, incorporating factors such as case demand, infrastructure availability, socioeconomic indicators, and access-to-justice metrics. The resulting scoring model provided a robust decision-support framework and was adopted by the Court's Presidency to guide the expansion strategy of the Digital Court Program.

Data Analyst | CEMIG | 2023

Contributed to the development of analytics projects supporting logistics and supply chain operations at one of Brazil's largest energy companies. Led initiatives focused on process optimization, automation, operational efficiency, and data-driven decision-making.

One of the most impactful projects involved mapping and redesigning logistics processes in collaboration with the Materials Planning team. As part of this initiative, I developed an ETL (Extract, Transform, Load) solution using SAS that automated utility pole purchase orders based on inventory levels, lead times, and distribution across warehouses. The solution reduced stockout risks and improved supply planning accuracy.

Following the ETL implementation, I designed and developed an inventory and procurement management dashboard that enabled real-time monitoring of stock levels and purchase orders. The solution provided proactive replenishment insights and automated alerts to support planning decisions, taking into account supplier-to-warehouse lead times. This initiative enhanced logistics reliability, forecast accuracy, and overall operational efficiency.

Freelance Data Scientist | 2022

End-to-End Data Science Project | Retail (Mini-Markets for Residential Communities)

Led an end-to-end Data Science project for a retail company operating autonomous convenience stores in residential communities. The project focused on product portfolio management and assortment optimization, leveraging a data-driven approach to identify purchasing patterns, support product prioritization and discontinuation decisions, and define optimal product assortments for different store formats (Lite, Standard, and Max).

Managed the complete analytics lifecycle, including data collection, integration, and preparation of historical sales data from more than 50 stores, exploratory data analysis (EDA), feature engineering, and statistical modeling. Delivered RFM-based product performance analyses segmented by retail network and store profile, and developed a Python-based dashboard to support continuous monitoring and data-driven strategic decision-making.

Senior Technical Coordinator | Move Infraestrutura | Mining Industry | 2018–2020

Coordinated land management service contracts for major mining companies, acting as the primary liaison between internal teams and external stakeholders. Managed multiple stakeholder groups simultaneously, including analysts, managers, directors, clients, and community representatives, ensuring alignment on project objectives, timelines, and deliverables.

Led the planning and execution of field and office operations, overseeing team performance, resource allocation, training, and project delivery while balancing quality, cost, and schedule requirements. Collaborated closely with clients to develop tailored technical solutions, present project results, define service agreements, and coordinate field activities within communities impacted by mining operations.

MACHINE LEARNING PROJECTS

End-to-End Sales Forecasting Platform

- Developed an XGBoost forecasting model using over 1 million records from 1,115 stores.
- Applied feature engineering, time-series cross validation, hyperparameter optimization, and performance monitoring.
- Built and deployed prediction APIs using Flask and cloud infrastructure.
- Implemented business-oriented forecasting scenarios supporting executive decision-making.

Customer Propensity Modeling & Ranking System

- Developed and evaluated eight machine learning models including LightGBM, XGBoost, CatBoost, Random Forest, and Logistic Regression.
- Built customer ranking models using Precision@K, Recall@K, and Lift optimization.
- Conducted hyperparameter optimization and cross-validation to improve model performance and generalization.
- Generated a ranking solution capable of identifying high-propensity customers within operational constraints.

EDUCATION

Postgraduate Certificate in Artificial Intelligence and Machine Learning *(In Progress)*

PUC Minas, Brazil

Expected Completion: December 2026

MBA in Industry 4.0

PUC Minas, Brazil

Postgraduate Specialization in Engineering Valuation and Expert Witness Services

PUC Minas, Brazil

Bachelor's Degree in Civil Production Engineering

CEFET-MG (Federal Center for Technological Education of Minas Gerais), Brazil

Technical Diploma in Electronics

CEFET-MG (Federal Center for Technological Education of Minas Gerais), Brazil

LANGUAGES

Portuguese (Native) | English (Advanced)

PUBLICATIONS
